

CloudReady[®] for Office 365 MONITOR THE ENTIRE OFFICE 365 SUITE. FROM EVERYWHERE.

End-to-End Visibility for All of Office 365

Exoprise CloudReady is the leading solution for monitoring your entire Office 365 deployment. Find and fix performance problems, detect changes and plan your network for capacity. With CloudReady you'll know about outages instantly — before Microsoft knows itself.

CloudReady provides full coverage for all of the Office 365 protocols and applications. Whether its Web, ActiveSync, MAPI, ADFS, Skype for Business or SharePoint Online — Exoprise has you covered. Deploy sensors across multiple branch and cloud locations to model your different topologies, network conditions and scenarios for always-on monitoring, continous early detection and end-to-end network visibility.

Network Intelligence for ALL of Office 365

For real-time troubleshooting and long-term SLA benchmarks, no other tool covers your SaaS like CloudReady. Easily deployed from a cloud-service, you get comprehensive end-toend monitoring for your most mission-critical cloud apps and services.

- → Self-service deployment in minutes
- → Instant visibility and pre-configured alarms for detection
- → Customizable dashboards
- → Integrates with your existing management systems

Your Cloud Apps. Your Locations

- ightarrow Monitor your key locations
- → View changes to the applications or Network Path Performance
- → End-to-end, cross-server coverage for Single Sign-On, ADFS, Azure AD
- → Identify the faulting LAN, WAN, access point or Internet Service Provider

CloudReady Office 365 Monitoring

Enterprise Use Cases

Plan Your Office 365 Deployment

Your networks, proxies and SSO capacities will always change. Test and optimize your Office 365 capacity and routes before and after. Skipping this breaks things.

Proactively Monitor Office 365 End-to-End

Know about problems before they impact your users. Find out even before Microsoft does and react quickly with deep diagnostics.

Troubleshoot Issues, Any Location

CloudReady is instantly deployed to any branch office or network topology. CloudReady runs alongside any workload, any Windows® device or VM

Benchmark Your Organization

With Crowd Data Analytics™ you can see how your WAN, LAN, MPLS & WiFi compares to others. Find out if the problem is yours, the ISPs, or the providers in real-time

Take Credit. Assign Blame™

User service levels depend on the performance and availability of the network between you and your cloud service providers. CloudReady provides node-by-node performance data for your network as well as the internet service providers you use.

- → Identify problems anywhere along the service delivery chain.
- Diagnose multi-server issues across your proxies, Single Sign-On clusters, Directory servers and more.
- \rightarrow Detect and see impacts of ISP route changes.
- → Measure relative performance of each network hop.
- → Benchmark your environment against others, see how you're doing.
